Implementation

These document classes can only be used with LaTeX 2_ε, so we make sure that an appropriate message is displayed when another TeX format is used.

```
\NeedsTeXFormat{LaTeX2e}[2020-10-01]
```

We define some constant token lists immediately useful.

```
\ExplSyntaxOn

Messages

We specify the messages come from a class, which is letgut (see https://github.com/latex3/latex3/issues/887).

```
\prop_gput:Nnn \g_msg_module_type_prop { letgut } { Class }

— Distance between the baseline of the header text and the decorative line :

```
\dim_const:Nn \c__letgut_head_rule_skip_dim { 0.115cm }
```

— Head rule width :

```
\dim_const:Nn \c__letgut_head_rule_width_dim { 0.03cm }
```

— Dimensions of the banner.

  — Thickness of the “L”.

  ```
  \dim_const:Nn \c__letgut_banner_thickness_dim { 4cm }
  ```

  — Height of the “L” (that of the text area plus 3cm).

  ```
  \dim_const:Nn \c__letgut_banner_height_dim  {

  ```

— Height of the membership reminder box.

```
\dim_new:N \g__letgut_membership_reminder_box_height_dim
```

— Horizontal space for the frontcover in the margin in book reviews.

Proulion

```
  \dim_const:Nn \c__letgut_bookreview_frontcover_margin_sep_dim {
    4mm
   }
```

— Dimensions used by the listings and the examples.

```
\dim_const:Nn \c__letgut_height_mentions_dim { 5mm }

  \c__letgut_number_offset_dim
}
```

Skips (lengths with rubber components)

The following skips, borrowed from the standard classes, are specified in ex unit, which depends on the font used and hence have to be specified after the class has been loaded ; in fact, we postpone this at the end of the preamble, when the font is specified (thanks to `\setmainfont`).

```
\hook_gput_code:nnn { begindocument/before } { . }{%
```

Before and after :

— “titles titles” :

```
  \skip_const:Nn \c__letgut_before_title_title_skip
  {
    3.5ex plus 1ex minus .2ex
  }
  \skip_const:Nn \c__letgut_after_title_title_skip
  {
    2.3ex plus .2ex
  }
```

— subtitles titles :

```
  \skip_const:Nn \c__letgut_before_subtitle_title_skip
  {
    \c__letgut_before_title_title_skip
  }
  \skip_const:Nn \c__letgut_after_subtitle_title_skip
  {
    \c__letgut_after_title_title_skip

— paragraphs titles :

```
\skip_const:Nn \c__letgut_before_subsubsection_title_skip
{
  1.5ex plus .5ex minus .2ex
}
\skip_const:Nn \c__letgut_after_subsubsection_title_skip
{
  0.75ex plus 0.1ex
}
```

— paragraphs titles (identical to the subsubsection ones) :

```
\skip_const:Nn \c__letgut_before_paragraph_title_skip
{
  \c__letgut_before_subsubsection_title_skip
}
\skip_const:Nn \c__letgut_after_paragraph_title_skip

Class and package loading

The classe letgut is based on the `article` class. It is by default two sided because of the alternating headers, and will by typeset with `11pt` as global font size.

```
\LoadClass[twoside,11pt]{article}
```

We now load some packages.

— The classe letgut will have to be used with LuaLaTeX. Hence the font selection package for XeLaTeX and LuaLaTeX.

```
\RequirePackage{fontspec}
```

— For subliminal refinements towards typographical perfection.

```
\RequirePackage[
, stretch=30
, shrink=25
, letterspace=150
]{microtype}
```

— Help in implementing paragraph layouts where the paragraphs are separated by a vertical space instead of (or in addition to) indenting them.

```
\RequirePackage{parskip}
```

— Extensive control of page headers and footers in LaTeX 2ε.

```
\RequirePackage{fancyhdr}
```

— Flexible and complete interface to document dimensions.

```
\RequirePackage[a4paper]{geometry}
```

— Enhanced support for graphics.

```
\RequirePackage{graphicx}
```

— Biolinum font.

```
\RequirePackage{biolinum}
```

— Extending the array and tabular environments.

```
\RequirePackage{array}
```

— Completely customisable TOCs.

```
\RequirePackage{etoc}
```

— Font containing a set of web-related icons.

```
\RequirePackage{typicons}
```

— Control layout of itemize, enumerate, description, and design our own lists.

```
\RequirePackage{enumitem}
```

— Select alternative section titles.

```
\RequirePackage{titlesec}
```

— Driver-independent color extensions.

```
\RequirePackage[table]{xcolor}
```

— Several logos and ornaments.

```
\RequirePackage{fourier-orns}
```

— Drawing of Vectorian ornaments.

```
\RequirePackage{pgfornament}
```

— Control float placement.

```
\RequirePackage[section,above]{placeins}
```

— Sophisticated verbatim text.

```
\RequirePackage{fancyvrb}
```

Brouillon

— Publication quality tables in LaTeX.
```
\RequirePackage{booktabs}
```
— Context sensitive quotation facilities.
```
\RequirePackage{csquotes}
```
— Mathematical tools to use with (and which loads) amsmath.
```
\RequirePackage[fleqn]{mathtools}
```
— Better accessibility support for PDF files. This package is used because we want the material added to the background (banner on the first page and draft watermark) to be not selectable in order to let the reader who wants to copy the interesting text be able to select it.
```
\RequirePackage{accsupp}
```
— A comprehensive (SI) units package.
```
\RequirePackage{siunitx}
```
— Additional TeX-family logos (which loads and extends hologo which is collection of logos with bookmark support).
```
\RequirePackage{bxtexlogo}
```
— Coloured boxes, for LaTeX examples and theorems, etc.
```
\RequirePackage{tcolorbox}
```
— Compile TeX code stand-alone or as part of a document.
```
\RequirePackage[group=false,subpreambles,sort]{standalone}
```
— Attach arbitrary files to a PDF document.
```
\RequirePackage[icon=Paperclip]{attachfile2}
```
— Expandable macros to extract the data from references and allow counter assignments or calculations.
```
\RequirePackage{refcount}
```
— Select colors with proper WCAG color contrast.
```
\RequirePackage{ninecolors}
```
— Typeset tabulars and arrays with LaTeX3 (for the alert boxes typeset as simple tabulars).
```
\RequirePackage{tabularray}
```
— Multilingual support for Plain TeX or LaTeX.
```
\RequirePackage[english,french]{babel}
```
— Intelligent page references.
```
\RequirePackage[nospace,french]{varioref}
```
— Macros for Euro sign.
```
\RequirePackage[right]{eurosym}
```
— Typeset source code listings using LaTeX.
```
\RequirePackage{listings}
```
— Modifying the layout of floats.
```
\RequirePackage{floatrow}
```
— Sophisticated Bibliographies in LaTeX.
```

Settings for the loaded packages

```
\frenchsetup{CustomiseFigTabCaptions}

— Depending on some chosen class options, some packages have to be loaded, notably before package hyperref is loaded, and actions are taken accordingly.

  — If the ‘draft‘ mode (default) is on, we load the package lua-typo which highlights typographical flaws with LuaLaTeX. For the moment,

  the package lua-typo isn’t loaded since the ‘luacolor‘ package it loads

  currently does not work well in `shipout/background` (see https://github.com/ho-tex/luacolor/issues/4).

```

```

  Currently, we can’t use l3color’s `\color_fill:n` (see https://github.com/ho-tex/luacolor/issues/4#issuecomment-848774260) and we have to rely on xcolor’s `\color`.

```

Options

We now define the options of the class :

— `for-readers`~/~`for-authors`, depending on the target audience,
— `draft`~/~`final` depending on the state of the document,
— `paper`~/~`screen` depending on the way the document will be read,
— `number` for the number of the issue,
— `date` for the date of the issue, either empty (hence the current (month) date) or at the format `YYYY-MM` or as free input,

Brouillon

— `pagecolor` (relevant only with the (default) `screen` load time option) for a color of the page other than the default one (used behind the scene by the `letgut-banner` package),
— `watermark letter` for another letter than the “g” in watermark,
— `watermark scale` for the case the letter in watermark is too big,
— `allcolorslinks` for the color of (all) the links,
— `membership-reminder` that typesets a membership reminder on the first page,
— `editorial` depending on the editorial is wanted or not,
— `infomations` depending on the GUTenberg informations are wanted or not,
— `detailedtoc` depending on the automatic ToC is wanted maximally (until subparagraphs) detailed or not.

“Title” and marks

We redefine `\@title` in order to make it empty. Hence we can later test if the `\title` has been populated by the user (thanks to `\title`) and, if so, we will (automatically) display on the first page and headers the provided title instead of the number and the date (see below).

```
\tl_gclear:N \@title
```

At the end of preamble, we put the `\@title` (empty or populated by the user) into `\g__letgut_@title_str` for later tests.

```
\hook_gput_code:nnn { begindocument/before } { . }
{
  \str_gset_eq:NN \g__letgut_@title_str \@title
```

The number is added only if it is

> 0.

```
\tl_gset:Nn \g__letgut_title_tl {
   \int_compare:nNnT
   {\g__letgut_number_int}
```

Brouillon

```

First page handling

The first page is special as it should automatically contain certain elements :

- the banner,
- either the number and the date of the issue, or a given title,
- the table of contents,
- the editorial,
- the membership reminder.

The first page is inserted only is the target audience is the readers of the Lettre.

```
\hook_gput_code:nnn { begindocument/before } { . }{
  \bool_if:NT \g__letgut_for_readers_bool {
\file_if_exist:nTF {\c__letgut_banner_file_tl.pdf}{
  \hook_gput_next_code:nn { shipout/background }

        \__letgut_orig_includegraphics*[scale=0.96]{
          \c__letgut_banner_file_tl.pdf
        }
      }
    \end{picture}
  }
}{
```

The `pagecolor` option is possibly set (with `\hook_gput_code:nnn{begindocument/before}{.}`) and the page color chosen has to be used for the letters of the banner so the following code has to be postponed after the former (hence here `\hook_gput_code:nnn { begindocument } { . }` and with `\hook_gput_code:nnn {begindocument/before } { . }`).

```
  \msg_term:nn{letgut}{Banner~file~not~provided}

Here, we insert the title, but don't rely on `\maketitle` because it lets to `\relax` the command `\title` which is used later as new sectionning levels for the titles of the articles of the Lettre. So we emulate the interesting part of the `\maketitle` command (borrowed from `article.cls`).

```
\null
\vskip 2em%
\begin{center}%
  \let \footnote \thanks
  {\LARGE \@title \par}%
\end{center}%

— No headers on the first page. This has to be inserted after the previous (customized) `\maketitle` since this command inserts a `\newpage` which would ruin the effort of `\thispagestyle{empty}` if inserted before.

```
\thispagestyle{empty}
```

— The table of contents is automatically added and has a bookmark entry. By default only the titles of the articles are shown (but the bookmarks have their natural depth) but the `detailedtoc` option make its depth possible until subparagraphs (which may be useful in order to check the structure of the Lettre).

```
\etocsetnexttocdepth{\g__letgut_detailedtoc_level_str}

Numbering

We want all the sections to be unnumbered.

Format

When used in titles, \hologo needs to be protected. In order to not bother the user with this peticularity, we make this the default for it.

We define the command `\lettrenumber` that displays the number of some *Lettre* issue :

- preceeded by "n° " if used starred,
- by default the current one,
- possibly shifted w.r.t. the current one, depending on the first token of the optional argument :
  - if it is not `.`, `+` nor `-` : this argument (pretty useless : it is easier to directly type the desired number),
  - if it is `.` : the current number of the *Lettre*(pretty useless : it is easier to just not use the optional argument),
  - if it is `+` or `-` followed by a number : the current number of the *Lettre*, shifted by what is specified.

The “*Lettre*” and “*Lettre* GUTenberg” expressions are treated separately since they are subject to variations, depending on how they are used. The corresponding commands `\lettre` and `\lettregut` used without star nor optional argument typeset resp. “*Lettre*” and “*Lettre* GUTenberg” :

- immediately followed by “n° ” if used starred,
- followed by some strings, depending on the first token of their optional argument :
  - if it is not ., + nor - : this argument,
  - if it is . : the current number of the *Lettre*,
  - if it is + or - followed by a number : the current number of the *Lettre*, shifted by what is specified.

Acronyms

The following command let us define acronyms. The arguments are as follows :

- #1 : optional argument that let us override the default settings of this command,
- #2 : the uppercase version of both the id and the short form of the acronym,
- #3 : the long form (in French if #4 has -NoValue-, in English otherwise),
- #4 : the French translation of an English acronym.

The first occurrences of the acronyms will be displayed in their short forms, with the long ones in footnotes. But what about acronyms whom first occurrences arise within footnotes ? We want them to be displayed as their short forms followed by their the

long form in parentheses. For this, we have to add a boolean at the beginning (and reversed at the end) of the `\footnote` command to know whether we currently are in a footnote or not and display the acronym accordingly.

BTW, we hack the `\footnote` command in order to mimic the `multiple` option of the footmisc package (consecutive `\footnote` commands make their corresponding footnote marks separated by commas). See https://tex.stackexchange.com/a/62091.

```
\NewDocumentCommand{\letgutacro}{ O{} m m o }
{

For printing the acronyms, we define two new heading templates for the structure levels `\title` and `\subtitle`.

```
\NewAcroTemplate[heading] {title}
  { \title { \acrolistname } }
\NewAcroTemplate[heading] {subtitle}
  { \subtitle { \acrolistname } }

We make `\letgutacro` available only in the preamble part of the document (otherwise, no warning from acro but only the long form of the acronym is printed when used for the first time with `\ac`).

```
\@onlypreamble\letgutacro

Input of articles

We create our own `\input` command for the articles of the Lettre with the following characteristics :

- The previous style is applied automatically. Hence, the keywords defined in a previous file (by loading some peticular (La)TEX dialects, i.e. control sequences and keywords specific to some class or packages) won't interfere with the ones of the current file.
- All the acronyms are reset (each acronym is developped at its first occurrence).
- The source file of the article is attached to the PDF (if desired, otherwise, use the starred version).

We first create a function that attach to the PDF a file only if it exists in the current directory and is non empty. This will be applied to both the `localconf.tex` and `pre-documentclass.tex` files below.

```

Listings

We define a style for all the listings which resets all the TEX control sequences and keywords, and fix some defaults.

```
\lstdefinestyle{__letgut_reset_listings_styles}{
  basicstyle=\ttfamily,
  breaklines,
  language=TeX,%
  texcs={},%
  language={},%
  keywords={},%
```

Brouillon

```
    keywords=[2]{},%
    keywords=[3]{},%
    keywords=[4]{},%
    keywords=[5]{},%
    otherkeywords={},%
    alsoletter={},%
    alsodigit={},%
    escapechar=£,
    columns=fullflexible,
    keepspaces=true,
    upquote=true,
    showstringspaces=false,
```

If line numbers are asked, they should always have the same layout and not be selectable (hence the `\__letgut_unselectable:n`).

```
numbersep=\c__letgut_number_sep_dim,
numberstyle=\scriptsize\ttfamily
\color{__letgut_foregroundLinenumber}
\__letgut_unselectable:n {} ,
```

Because of a current issue involving parskip and listings (https://github.com/FrankMittelbach/fmitex-parskip/issues/3), we have to set the skip below the displayed listings to a (almost) zero length. We do the same for the above skip.

```
  aboveskip={0\p@ \@plus 6\p@},
  belowskip={0\p@ \@plus 6\p@},
}
```

We define as short equivalent of `\lstinline` the character ™ which is unlikely to be used in ordinary text.

```
\lstMakeShortInline[breaklines=false]™
```

We start with an empty listings style.

```
\lstset{ style=__letgut_reset_listings_styles }
```

LaTeX listings and examples

We define the colors for the syntax highlighting of LaTeX listings.

```
\colorlet{__letgut_texcs}{blue}
\colorlet{__letgut_comment}{gray}
\colorlet{__letgut_argument_specification_separator}{red}
\colorlet{__letgut_argument_specification}{cyan}
\colorlet{__letgut_mandatory_argument}{purple}
\colorlet{__letgut_environment}{teal}
\colorlet{__letgut_key}{__letgut_mandatory_argument}
\colorlet{__letgut_value}{violet}
\colorlet{__letgut_optional_argument}{__letgut_key}
\colorlet{__letgut_math}{green!50!black}
```

We add our own language files taken in account by the package listings. They will be considered after the other usual ones, if found. They are searched firstly in the current directory, secondly in the parent directory, thirdly in the TDS.

```
\def\lstlanguagefiles{
  % lstlang0.sty,
  lstlang1.sty,
  lstlang2.sty,
  lstlang3.sty,
```

Révolution

```
    ./\c__letgut_lstlanguage_file_tl,
    ../\c__letgut_lstlanguage_file_tl,
    \c__letgut_lstlanguage_file_tl,
}
```

We define a listing style specific to LaTeX listings.

```
\lstdefinestyle{__letgut_latex_listings_style}{

  alsolanguage=[AlLaTeX]TeX,%
  alsolanguage=[LaTeX]TeX,%

  keywordstyle={[4]\color{__letgut_value}},
  keywordstyle={[5]\color{__letgut_argument_specification}},
  keywordstyle={[6]\color{__letgut_key}},
  numbers=left,
```

The `listings` package defines some of the LaTeX's environments as keywords of order 1. This would force us to do the same in our own language driver file but would ruin our effort to stylize in a special way (in red) other keywords (see `otherkeywords={...}`) that are stylized as keywords of order 1. Hence, we delete these keywords of order 1 and will add them as keywords of order 2 like all the environments in our own language driver file (in the `extendedLaTeX` dialect that we load by default).

```
deletekeywords={%
  array,center,displaymath,document,enumerate,eqnarray,%
  equation,flushleft,flushright,itemize,list,lrbox,math,minipage,%
  picture,sloppypar,tabbing,tabular,trivlist,verbatim,%
},%
```

```
  literate=*%
  {\\\\}{{\color{__letgut_texcs}\textbackslash\textbackslash}}}{2}%
  {\\[}{{\textcolor{__letgut_math}{\textbackslash[}}}{2}%
  {\\]}{{\textcolor{__letgut_math}{\textbackslash]}}}{2}%
  {$}{{\textcolor{__letgut_math}{\$}}}{1}%$
}
```

We first define some colors used in the listings and examples.

```
\definecolor{__letgut_backgroundCode}{cmyk}{0,0,0,0.04}
\definecolor{__letgut_borderCode}{cmyk}{0,0,0,0.45}
\definecolor{__letgut_foregroundLinenumber}{cmyk}{0,0,0,0.5}
\definecolor{__letgut_foregroundMention}{cmyk}{0,0,0,0}
\definecolor{__letgut_backgroundResult}{cmyk}{0,0,0,0}
```

For the listings and examples, we rely on package tcolorbox, and more specifically on some of its libraries.

```
\tcbuselibrary{listings,breakable,skins,hooks,documentation}
```

Provision

We want some common settings for all the ~tcolorbox~es.

```
\tcbset{

}
```

The functions :

— `\__letgut_code_result_mention_box:n` draws the mentions “code” and “résultat” in the codes boxes and the possible corresponding results boxes,

— `\__letgut_title_code_result_box:n` for the title of codes and the results boxes : “Exemple” followed by the number of the example and, if a `title` addon option is provided, the specified title addon.

The package tcolorbox listings defined below make use of package cleveref's features. But, since the latter package is loaded `\hook_gput_code:nnn { begindocument/before } { . }`, the same is needed for these listings.

```
\hook_gput_code:nnn { begindocument/before } { . }{
```

We now define the environments that let us display :

1. only LaTeX code :

Brouillon

```
\DeclareTCBListing[
  auto~ counter,
  crefname={exemple}{exemples}
]{ltx-code}{ !O{} }{%
  __letgut_code,
  listing~ only,
  #1%
}
```

1. both LaTeX code and its result :
   (a) ordinary :

```
\DeclareTCBListing[
  use~ counter~ from=ltx-code,
  crefname={exemple}{exemples}
]{ltx-code-result}{ !O{} }{%
  __letgut_code_result,
  #1%
}
```

1. with the result obtained externally :

```
\DeclareTCBListing[
  use~ counter~ from=ltx-code,
  crefname={exemple}{exemples}
]{ltx-code-external-result}{ O{} m }{%
  __letgut_code_result,
  listing~ and~ comment,
  image~ comment={width=\l__letgut_result_width_dim}{#2},
  center~ lower,
  #1%
}
}
```

The examples with code and result side by side will be floating but we want the ones being of their call out pages to have before and after them a reduced vertical glue (`\g__letgut_reduced_intextsep_dim`). Hence we store the original glue (`\intextsep`) in a custom one (`\g__letgut_orig_intextsep_dim`) in order to retrieve the original skip for floats other than these ones.

```
\skip_const:Nn \c__letgut_reduced_intextsep_skip {
  4\p@ \@plus .667\p@ \@minus .667\p@
}
```

We now use hooks in order to…

```
\hook_gput_code:nnn { env/ltx-code-result/before } { . }{
  \int_gincr:N \g__letgut_ltx_example_int
  \str_set:Nx \g__letgut_label_ltx_example_str {

  }
  \str_set:Nx \g__letgut_callout_label_ltx_example_str {
    \c__letgut_callout_label_ltx_example_str-
    \int_use:N \g__letgut_ltx_example_int
  }
```

Brouillon

```
    \label{\g__letgut_callout_label_ltx_example_str}
    \tl_set:Nx \l__letgut_tmpa_tl {
      \getpagerefnumber {
        \g__letgut_callout_label_ltx_example_str
      }
    }
    \tl_set:Nx \l__letgut_tmpb_tl {
      \getpagerefnumber {
        \g__letgut_label_ltx_example_str
      }
    }
    \tl_if_eq:NNF \l__letgut_tmpa_tl \l__letgut_tmpb_tl
    {
      \skip_set_eq:NN \intextsep \c__letgut_reduced_intextsep_skip
    }
  }
```

Since the syntax highlighting is reset at each `\input`, the `ltx-code-*` environments above provide syntax highlighting only for the commands of the TEXdialects specified in the class. So we provide a specific command that let us specify (the dialects of) the main language (TEXby default) for which we want syntax highlighting. This assumes that the commands and keywords of these packages are listed (properly, according to the `listings` package syntax) in the 'lstlang0.sty' or `letgut-lstlang.sty` files.

```
\cs_new_protected:Npn \__letgut_tcbset:n #1

Local config file

Each issue of the Lettre requires certain local configurations : configuration dedicated to the issue in question, particular packages used in the articles, specific configurations of the package listings, etc. In order to not clutter the main fichier `.tex` of the Lettre, a local configuration file named `localconf.tex`, if present in the current directory, is automatically included at the end the preamble. And since this file is input in the current category régime (`\ExplSyntaxOn`), a `\ExplSyntaxOff` is automatically inserted at its beginning.

```
\file_if_exist:nT {./\c__letgut_local_config_file_tl}{
  \@pushfilename
  \xdef\@currname{\c__letgut_local_config_file_tl}
  \input {./\c__letgut_local_config_file_tl}
  \@popfilename
}
```

We don't want the book review entry types to be listed in the bibliography (they appears only thanks to the `bookreview` environment).

(biblatex) Data model

We give the (biblatex) data model that enriches the default one for several purposes :

— the books reviews,
— the books advertisements.

```
