# A Radboud University titlepage

Mart Lubbers

2022/02/21

## 1 Introduction

`rutitlepage` is an unofficial LaTeX package to generate titlepages for Radboud University. It uses official vector logos by the university. The package depends on `geometry`, `graphicx`, `ifpdf`, `keyval` and `iflang`. The logo changes when `babel-dutch` is loaded; this package does not depend on it.

### 1.1 Contributors

`rutitlepage` is currently maintained by Mart Lubbers but work has also been done by (in order of date of contribution): Camil Staps[1], Daan Sprenkels[2], and Chris Kamphuis[3].

Previously, this titlepage flew around on the university for at least several years in many forms. I'm not sure who created it first but credits to them!

## 2 Usage

`\maketitleru` This macro creates the actual titlepage. It has several options that can be passed in a `keyval` manner (see the examples below). All options are optional. The available options are:

[1] `https://github.com/camilstaps`
[2] `https://github.com/dsprenkels`
[3] `https://github.com/chriskamphuis`

| Option | Description | Layouts[4] | Default |
|---|---|---|---|
| `authors` | The name(s) of the primary author(s). | `t`, `17`, `22` | `\@author` |
| `authorstext` | A text describing the author(s). | `t` | `Author:` |
| `colour` | Gives the logo colours. No value needed. | `17`, `22` | |
| `course` | The name of the course. | `t`, `22` | |
| `date` | The date. | `t`, `17`, `22` | `\@date` |
| `institution` | The institution the document was written at. | `t` | Radboud University Nijmegen[5] |
| `layout` | The layout: `traditional` or `seventeen`. See the examples below. | `t`, `17`, `22` | `seventeen` |
| `nextpagenr` | The page number of the next page. | `t`, `17`, `22` | `\thepage+1` |
| `others` | Groups of other important people, besides the author(s). The syntax is: `{Header}{Names}`. For more than one group, use: `{{...}{...},{...}{...}}`. | `t`, `17`, `22` | |
| `subtitle` | The italic text under the title. | `t`, `17`, `22` | |
| `title` | The main document title. | `t`, `17`, `22` | `\@title` |

# 3 Examples

The following code generates the three titlepages below:

```
\maketitleru[
    layout=traditional,
    authors={John Doe},
    date={Tomorrow},
    others={{Supervisor:}{Jane Doe},{Second reader:}{Joanne Dune}},
    course={Master's Thesis},
    title={The 'traditional' layout},
    subtitle={Simple elegance}]

\maketitleru[
    layout=seventeen,
    authors={John Doe},
    date={Tomorrow},
    others={{Supervisor:}{Jane Doe},{Second reader:}{Joanne Dune}},
    title={The 'seventeen' layout},
    subtitle={Based on the latest corporate identity guidelines}]

\maketitleru[
    authors={John Doe},
    date={Tomorrow},
    others={{Supervisor:}{Jane Doe},{Second reader:}{Joanne Dune}},
    course={Master's Thesis},
    title={The 'twentytwo' layout},
    subtitle={Slightly modified 'seventeen' including course information}]
```

[4] Describes in which layouts the key is applicable. `t` stands for 'traditional'; `17` for 'seventeen'; `22` for 'twentytwo'. See the `layout` option and the examples below.

Master's Thesis

Radboud University Nijmegen

---

**The 'traditional' layout**

---

*Simple elegance*

*Author:*
John Doe

*Supervisor:*
Jane Doe

*Second reader:*
Joanne Dune

Tomorrow

# The ‘seventeen’ layout

*Based on the latest corporate identity guidelines*

John Doe

Tomorrow

*Supervisor:*
Jane Doe

*Second reader:*
Joanne Dune

Radboud University

Master's Thesis

# The 'twentytwo' layout

*Slightly modified 'seventeen' including course information*

John Doe

Tomorrow

*Supervisor:*
Jane Doe

*Second reader:*
Joanne Dune
